Water & Sewer Division

Highland's Water & Sewer (W & S) division is made up of a 6 man crew. Their responsibilities include water main installation, water main repair, fire hydrant flushing, fire hydrant testing, sanitary sewer main jetting, and manhole maintenance. The division has a total of 67 miles of water mains and 42 miles of sanitary mains that they are responsible for keeping in good working order.

Regular duties for this division include, but are not limited to:

- } Jetting and televising of sewer mains. Crews work on a monthly maintenance schedule to inspect and maintain sewer mains to help prevent sewer blockages and backups.
- } Twice a year all fire hydrants are flushed to help maintain the quality of our drinking water.
- } Emergency repairs to broken water lines

Besides all of their regular duties, very soon the division will begin constructing a new water line to serve the site of the new St. Joseph's Hospital. This will be a 10" main, nearly 4,300' long, with the installation including 10 new fire hydrants. This project is expected to begin this month and if the weather holds and all goes well, construction of the new line is expected to take about a month to complete.
